Meeting Minutes

- Cudgen Lakes Community Consultative Committee

16 February 2023

Project	Cudgen Lakes Sand Quarry	
Subject	Cudgen Lakes Quarry CCC	
Date/Time	16 February 2023 14:00	
Venue	Kingscliff WWTP – Sustainable Living Centre Meeting Room	
Attendees	Independent Chair:	
	Michael Ulph - Communications & Stakeholder Engagement, GHD	
	Kingscliff Sands – Quarry Operator:	
	Nick Gould – Quarry Supervisor	
	Matt Holloway – Quarry Technical Supervisor	
	Gales-Kingscliff / Kingscliff Sands:	
	Lisa Segal Peled – Gales via VC	
	Johnson Planning & Development:	
	Gavin Johnson	
	Community Members:	
	Felicia Cecil – community representative	
	Council Members:	
	Colleen Forbes – Tweed Shire Council Team Leader Development Assessment	
Apologies	Stephen Segal – Gales and KS Managing Director	
	Brad Holloway – Quarry Manager	
	Barry Green – community representative	
	David Bell – Team Leader Environmental Health	
	Ray Clark –Traffic Engineer	
Distribution list	DPIE Compliance:	
in addition to	Shelley McPhee – Team Leader Compliance – Far North Region (Murwillumbah)	
attendees	Angie Hollister - Senior Compliance Officer – Far North Region	
	RW Corkery & Co Environmental Consultants:	
	Scott Hollamby	

For more detail about each item if you wish please refer to the CCC Report which was provided to all CCC members prior to and at the CCC meeting and will be placed on website

Agenda item	Action	/Notes	Who
Welcome/Introductions	Velcome/Introductions • Waited for some attendees 14:00 to 14:13pm		MU
	-	Meeting opened 14:13pm	
	•	Welcome by Michael Ulph	
	-	Acknowledgement of Country	
	-	Representatives introduced themselves	
	•	Felicia Cecil – representing Chinderah District Residents	
		Association	
Apologies		As above	

Declaration of	None	
pecuniary interests		
Acceptance of previous minutes	 Acceptance of minutes dated 1 July 2022. Forwarded and seconded that Meeting Minutes 1 July 2022 are true and correct 	MU NG/LP
Business arising from previous minutes	 No questions or business arising from minutes of 1 July 2022. 	
Business operations	2022.	
	 Progress at the quarry Overview of recent operations referred to maps in CCC Report showing operations over the last 12 months and planning for the next 12 months. Improving driveway and internal pavements, planting of cactuses and succulents. Formation of west access track to enable 4WD access to 	NG
	 monitoring locations in the west. Increase in length of radial wall to enable more stockpiling of sand. New fence on boundary between KS and Hanson Quarry. 	
	 2. Equipment upgrades Dredge: New dredge expected delivery June 2023 - electric not diesel. Lower energy use, more efficient and quieter operation. MU noted this is an improvement for noise and environmental impact. Due to electricity needs - planning installation of power poles and transformer north of Altona Road to service dredge. Dredge is unmanned – this reduces WHS risks as no one on the dredge in the lake. Loader: New Volvo loader – used for loading sand into trucks - operator says it is a great improvement, can load bucket easily, needs less bucket lifts per truck. Using old loader as backup and to load trucks transporting shell grit and soil. <i>Excavator:</i> New excavator – used for cleaning site, lifting things - more efficient and more comfortable for the operator. 	NG
	 operator. 3. Sand processing and sales Continued operation of CDE washplant – washes dredged sand and stockpiles for sale. Majority of sand sold for use in concrete, also used for golf courses, asphalt, landscaping Question concerning quality/colour of sand – NG explained sun bakes the sand resulting in whiter colour 	NG
	4. Technology MH discussed that KS is constantly improving IT	MH

5	Audit / Monitoring	NG
	Independent Environmental Audit December 2022. On	
	Monday before the meeting a representative from DPI	
	came to check that recommendations have been carried	
	out:	
	 Height gauge in lake disappeared – new gauge 	
	installed.	
	• Blue Green Algae warning sign installed (no algae,	
	but just in case).	
•	Monitoring of all parameters as required – all data and	
	plans on website.	
6.		NJ
•	Continued blockages to the west	
•	Far north – drainage has been resolved	
•	Crescent Street – drainage problems due to Kingscoast	
•	Amazonian Frogbit acquatic weed – Rous County Council	
	assessing management.	
•	KS is preparing a management plan for Rous approval.	
•	Drainage Strategy Deed signed between GK and Council	
	July 2022 to do a new drainage strategy for Kingscliff in	GJ
	coordination with Council.	
7.	WH&S	NG
	Monitoring points installed next to site office to monitor	
	dust.	
•	KS management is aware of potential silica issues and	
	aiming to minimise dust exposure.	
•	NG attended a seminar about silica conducted by the Mines	
	Department.	
•	Full irrigation system on all roads to suppress dust.	
	MOD4 Scoping Study	NG
	Discussed the MOD4 Scoping Study to expand the Sand	
-		
	Procession Area (SPA) to enable soil processing for	
	landscape yards, gardens etc., and increase maximum road	
	transportation – no change to the maximum extraction	
	rate.	
•	The MOD will consider rearrangement of truck movements	
	and start of 6am Mon-Sat instead of 7am.	
•	Potential Acid Sulfate Soils (PASS) recovery order and	NG/SDS
	exemption application	
-	PASS is currently travelling long distances e.g. from Lismore	
	to Jacobs Well in Qld due to lack of closer disposal sites.	
•	Under quarry approval there is authority to accept PASS,	
	called VENM (b), for backfilling, reprofiling lake edge and	
	sale, under the approval.	
-	KS is in discussion with EPA for a licence to allow PASS	
	processing, including for placement in the quarry site.	

•	CF clarified that the PASS application is effectively for the lake area that will be backfilled in the future. The DA with	
	Council to move Altona fill pad to the north is not to accept	
	PASS.	
8.	Altona Fill Site, DA push fill north, DA to widen Altona	GJ
	Road	
•	North of current extraction lake – filling works commenced	
	in May 2022.	
•	Fill sources from Kingscoast, Tweed and south Queensland.	
•	Aware of and no fill from fire ant areas.	
•	CF (Council) stated Council are putting conditions on	
	consents about needing to avoid fire ant areas.	
•	Purpose for agricultural improvement and future	
	sportsfields.	
-	New DA being prepared to move fill pad to the north – not	
	increasing amount of fill.	
-	Separate DA to widen Altona Road for the last 150m to	
	allow trucks to pass.	
9.	Altona Road & Crescent St relocation	GJ
-	DA in preparation to relocate Altona Road and Crescent	
	Street to integrate with Turnock Street extension and	
	roundabout on Tweed Coast Road has been discussed with	
	Council.	
10	Operations expected February-June 2023	NG
-	NG discussed the possibility of installing floating solar	
	panels so that the electrical dredge can operate during the	
	day with solar power.	
-	A screener to screen soils and remove organic matter is	
	considered being added to the inventory if the MOD4 is	
	approved as there will be a larger processing area.	

General business	11. Planning Proposal	GJ
	 In November 2022 Gales presented a new masterplan to 	
	Council which addresses a number of Council's concerns	
	they had with Gales 2020 masterplan.	
	 Gales is awaiting a formal response from Council. 	
	12. CCC community member feedback	
	 FC asked if there has there been any feedback from the 	
	community on the quarry movements.	
	 CF stated that Council received some phone calls asking 	
	why filling is starting on Altona however there have been no formal complaints.	
	 GJ stated that Gales is in contact with Kingscliff Ratepayers 	
	Association (KRPA), met with them in November 2022 and	
	will present at their meeting in March 2023.	
	 FC asked if KRPA can be encouraged to have a 	
	representative on this CCC.	
	 MU stated that 2 community members on a CCC is a small 	
	number. The idea is that they are a conduit into the	
	, community. CCC 2019 guidelines say CCC membership	
	should have up to 7 community representatives. He noted	
	that is one community representative is away or sick there	
	will be only one community member and he would rather	
	there be more.	
	 MU suggested placing an add seeking expressions of 	
	interest through an ad in the paper e.g. TVW and will send	
	the wording to LP to then organise.	
	 CF suggested inviting the Compliance Team from the 	
	Department to the next meeting.	
Next meeting / site	The next meeting will be held Thursday 29 June 2023 at 2pm and MU	
inspection	will include a site inspection after the meeting.	
Close	The meeting was closed at 3:15pm by MU. ML	
Meeting minutes	Minutes submitted by: Lisa Segal Peled	
	Minutes approved by:	

Cudgen Lakes Sand Quarry

Community Consultative Committee Meeting

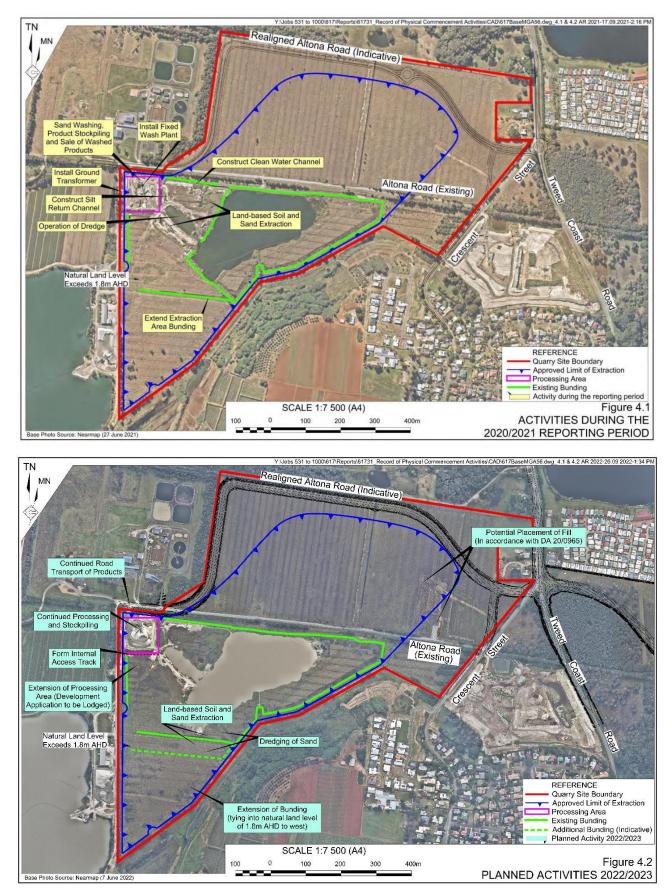

Thursday 16 February 2023 at 2pm

Kingscliff Waste Water Treatment Plant – Sustainable Living Centre Meeting Room

Meeting/Report No: 9

Previous Meetings and Reports: 7 April 2017, 20 November 2017, 28 September 2018, 18 November 2019 (report in lieu of meeting as no operations occurred on site in 2019), 19 April 2020 and 10 December 2020 (reports sent due to Covid-19 restrictions), 4 June 2021, 1 July 2022

Invitees/Attendees		
Community Members:	Independent Chair:	
Felicia Cecil – community representative	Michael Ulph - Technical Director – Communications &

Overview – Extracts from Annual Review 2021-2022

and reduced sound impact. Independent Environmental Audit 2020-2022	tem		
Actions arising from the last report • No queries were received following the June 2022 CCC meeting. ummary of Cudgen Lakes project (June 2022-February 2023) Sand extraction through dredging. • Sand washed by CDE washplant. • Clean fine sand placed by radial stacker and loaded onto trucks for export. • Fines retuned towards extraction pond but allowed to settle in fines pond. • Increase in sales and export by truck June – December 2022. Site works • Optimisation of internal truck route. • Concreting of entrance. • Increase in length of radial wall. • Landscaping at entrance. • New cattle fence erected along the western boundary of the site. • Progress installation of electricity north of Altona Road for connection to new dredge, dredge expected June 2023. Equipment upgrades • October 2022 - Otider second dredge, delivery expected June 2023. • February 2023 - delivery of second excavator. • Assessment of CDE upgrades for more efficient operation. • Continued improvement to minimise environmental impact and CO2 emissions. • New dredge is electric powered and will replace existing diesel dredge with reduced emission and reduced sound impact. • New dredge is electric powered and will replace existing diesel dredge with reduced emission and reduced sound impact.

A range of recommendations were also provided. 			
 New cattle fence erected along the western boundary of the site. Progress installation of electricity north of Altona Road for connection to new dredge, dredge expected June 2023. Equipment upgrades October 2022 - Delivery and commissioning of new Volvo Loader. December 2022 - Order second dredge, delivery expected June 2023. February 2023 - delivery of second excavator. Assessment of CDE upgrades for more efficient operation. Technology upgrades Continued improvement to minimise environmental impact and CO2 emissions. New loader, excavator and dredge (expected 6/23) have increased efficiency, reduced fuel/power consumption rate. New dredge is electric powered and will replace existing diesel dredge with reduced emission and reduced sound impact. Independent Environmental Audit 2020-2022 Second Independent Environmental Audit covering previous 3 years finalised December 2022 First audit covered period from commencement to November 2019. Audit can be viewed at https://www.galeskingscliff.com.au/reports, scroll to bottom. The audit concludes that "Overall, the project environmental performance in compliance with Project Approval MP 05_0103B Modification 2 was satisfactorily met". A range of recommendations were also provided.

Dr	ainage
•	Drainage from the entire site has been compromised, and the site consequently wetted u
	limiting grazing and causing operational problems including stripping topsoil prior to drec and access and works related to filling north of Altona. These blockages were:
	 From the northwest corner – this was addressed by Council cleaning the drain this
	the northern part of the WWTP;
	 Along the southern boundary – blockages in the immediately downstream proper
	were addressed by the neighbour. Blockages downstream from there might still b
	present.
	 Along Crescent Street – caused by works associated with Kingscoast development These have now been completed, although a new drainage connection has been
	established at the southwestern part of Crescent Street.
•	Noxious weeds – Amazonian frogbit was identified near the WWTP and subsequently fou
	east of Tweed Coast Road. Rous Council is attending to its treatment with regular assess
	and treatment.
Flo	ooding
•	Drainage Strategy Deed signed between Gales and Council on 28 July 2022. The Deed req
	Gales to undertake a Drainage Strategy for the West Kingscliff drainage catchment in
	accordance with Council requirements to replace the outdated 2000 strategy.
M	onitoring
•	Continued environmental monitoring, including noise, air quality, surface water, groundw
•	monitoring carried out in accordance with Management Plans.
	These are regularly reported and reviewed in detail by the Audit which can be viewed at: www.galeskingscliff.com.au (Projects - Cudgen Lakes – Approvals and Reports – Annual R
	2021-22)
•	The washed sand itself is regularly assessed to ensure ongoing compliance with quality cr
	required by various clients.
He	ealth and Safety
•	Quarry Manager in regular contact with Workplace health and safety consultant.
•	The internal vehicle flow has been designed for safety and to minimise interaction betwee
	heavy vehicles and pedestrians and civil vehicles.
•	Signage is placed for safety e.g. limited access, induction required, risks.
W	orks north of Altona Road (within Quarry approval area)
•	Works to fill north of Altona Road in accordance with DA 20/0965 commenced May 2022
	filling campaigns in the second half of 2022.
•	Fill is to enable higher grazing lands protected against wetting up and later sports fields between Crescent Street and the WWTP.
•	Discussions are ongoing between Gales and Council regarding the location of the sportsfi
	north of the lake. Gales met with Council in November 2022 and is waiting for a response
	Council to advance sportsfields location and design.
Ne	ew Altona DA (push north) & Altona Road and Crescent Street Relocation
•	Gales is seeking to move the approved 'Altona Fill' northwards towards the northern bou
	and submit plans for Altona Road relocation, which is approved by the Quarry Project app
	to be north of the extraction lake. Altona Road must join Tweed Coast Road and the nort
	part of Crescent Road must be relocated to satisfactorily join the Turnock Street extensio

	(Slink) and Tweed Coast Road intersection – this will be a roundabout when 4 lane widening occurs.
•	The widening of Tweed Coast Road to 4 lanes, a roundabout and connection with the new road to Elrond Road roundabout and Marine Parade will greatly improve access to the beachfront and relieve congestion on Cudgen Road, which will increase when the Hospital opens. Gales priority is to ensure that Altona Road is designed and approved to join in with Turnock extension and Tweed Coast roadworks.
м	DD4 Scoping Study submitted to DPIE – undetermined
Origina •	 ally lodged with DPIE May 2021. Scoping Study is undergoing changes before re-lodgement: Q2 2023 Scoping Report to be updated with changes including: reinstate original larger processing area for increased stockpiling, multi product processing; revised lake boundary - move northern area from west extraction to more easterly extraction to facilitate Council's preference for location of sportsfields; enabling reduced combined transportation rate of pumping + trucking sand out. Current approval allows for 650,000t dredge, 300,000t truck, 45,000t import VENM and PASS.
РА	SS Resource Recovery Order and Exemption application - undetermined
•	Lodged February 2022, Request for Information received May 2022. Project Approval allows for PASS import to the site (previously referred to as VENM(b)) – Gales is working with EPA to ensure have correct licencing in place to allow import to start. Meeting held with EPA 2 February 2023 to confirm the remaining tasks required to finalise the Environment Protection Licencing and issue the Resource Recovery Order and Exemption Application. Finalisation of this process is expected Q2 or Q3 2023.
Th	e importation of VENM/ENM/PASS is divided into:
•	use for reprocessing, backfilling the lake and profiling lake edges; and use for raising the existing land level (VENM/ENM or treated PASS) and associated uses such as Altona Road, land-based recreation, sports fields and land for development, to be approved and managed under separate development approvals, including DA 20/0965.
Compl	iance and reporting obligations
•	The Annual Review covering the period 1 July 2021 – 30 June 2022 was submitted to DPIE, Council, EPA, Water NSW & DPE Water end Sept 2022.
•	The Annual Review 2021/2022 can be viewed at www.galeskingscliff.com.au (Projects - Cudgen Lakes – Approvals and Reports – Annual Reviews)
Comm	unity Complaints
•	No complaints have been received.
Operat	tions expected January – July 2023
•	Continued sand processing and sales.
•	Site improvement activities including landscaping of sand processing area. Additional equipment – dredge and excavator – Investigate potential for installing Solar power and Dry screener
